Vibeflow — MVP Feature Requirements

Vibeflow is an AI copilot for video editors that understands editing instructions and executes them directly on the timeline. Instead of manually handling repetitive editing tasks, editors can describe what they want in natural language, and Vibeflow makes the corresponding timeline changes.

Core MVP features

01. AI timeline cuts

Core feature

Detect pauses, silences, dead space, and unnecessary gaps.

Automatically cut unwanted sections from the timeline.

Preserve the original sequence and clip order.

Allow commands such as “Remove all pauses longer than one second.”

Hinglish captions

Core feature

Transcribe Hindi-English mixed speech.

Generate captions with accurate timestamps.

Preserve English words spoken within Hindi sentences and vice versa.

Insert captions into the timeline with editable text and styling.

Support commands such as “Add Hinglish captions with bold keywords.”

B-roll detection and trimming

Core feature

Detect B-roll clips or sections that run longer than two minutes.

Identify unnecessarily long or repetitive visual sections.

Suggest shorter durations and trim them based on context.

Preserve important visual information and synchronize cuts with the main footage.

Let the editor specify: “Shorten all B-roll sections to 5–8 seconds.”

Transition insertion

Secondary feature

Detect hard cuts between clips.

Add transitions only when explicitly requested.

Support instructions such as “Add a 10-frame cross dissolve between these clips.”

Let the editor specify transition type, duration, and placement.

Preserve hard cuts everywhere else.

Vertical timeline conversion

Core feature

Convert a landscape editing sequence to a vertical 9:16 format.

Set the sequence resolution to 1080 × 1920.

Reframe subjects to keep faces and important objects visible.

Adjust positioning and scaling across clips.

Handle different framing requirements throughout the sequence.

Example: “Convert this timeline into a vertical Reel and keep the speaker centered.”
